Click Topic Title for Course Description

**Registration is limited to 25 participants per session.**

**The following equipment is required for the virtual sessions.**

To participate in a virtual training, a camera, microphone, and speakers are required. Most new laptops, smartphones, and tablets are equipped with internal cameras, microphones, and speakers. These internal devices are sufficient for use in our virtual trainings.

However, for the best experience, we suggest participants use an external headset with a built-in microphone. This may include your Apple earbuds or third party headphones with microphone. Headsets with built-in microphones provide listening privacy, reduce microphone feedback, and transmit higher quality audio.

If you have a pair of headphones that do not have a built-in microphone, your computer, smartphone, or tablet internal microphone will suffice, but to minimize microphone feedback, we ask that you still listen to the audio with your headphones plugged in.

If you do not have a pair of headphones with or without a built-in microphone, you may still complete the training using the internal camera, microphone, and speakers of your device.
